.NET Software Engineer | Security+ | Interim Secret Clearance | ASP.NET Core Web API | C# | EF Core | Blazor | SQL | IIS

SUMMARY

Full-stack .NET Software Engineer building secure, enterprise-grade systems in DoD environments. Security+ certified with an Interim Secret Clearance and experience supporting CUI data handling and CMMC-aligned development. Strong background in ASP.NET Core Web API, C#, .NET Framework 4.8, Blazor WebAssembly, Entity Framework Core Code First, SQL, Microsoft Fabric medallion workflows, Swagger/OpenAPI, IIS deployment, Jira, Azure DevOps, Agile/Scrum delivery, production support, structured documentation, AI-assisted workflow improvement, and cross-team communication.

TECHNICAL SKILLS

- **Frontend / Integration:** Blazor WebAssembly, C# WebAssembly, Razor components, strongly typed DTO-aligned UI workflows, ASP.NET Core API integration, validation patterns, UI components, JavaScript, HTML, CSS, usability improvements, defect resolution, and cross-functional interface delivery.
- **Backend / API:** C#, .NET 6+, .NET Framework 4.8, ASP.NET Core Web API, RESTful APIs, controller-based APIs, DTO design, model validation, dependency injection, async/await, LINQ, Swagger/OpenAPI, Postman, secure coding, production API support, SQL-backed services, stored procedures, and large monolithic enterprise systems.
- **Data / Fabric:** Microsoft Fabric pipelines, medallion architecture, Python Bronze ingestion, incremental loading, SQL cast and transformation logic in Silver, Gold aggregations, report-ready datasets, Google Drive API ingestion, Google Sheets delivery, scheduled refresh workflows, validation, synchronization, and traceable reporting outputs.
- **Architecture:** Clean Architecture, layered architecture, Controller to Service to DbContext flow, service-layer business logic, SOLID, explicit contracts, maintainable enterprise design, auditability, monolithic service support, cross-team handoff, predictable release behavior, and operational maintainability.
- **Security / Delivery:** CompTIA Security+, Interim Secret Clearance, CUI, CMMC-aligned development, IIS deployment, Git, Jira, Azure DevOps Wiki, Agile/Scrum, backlog refinement, story point estimation, WIP limits, sprint planning, release support, production troubleshooting, documentation, and stakeholder communication.
- **AI Tools:** ChatGPT and Gemini for workflow improvement, code review support, documentation drafting, troubleshooting, refactoring analysis, test scenario planning, productivity gains, implementation research, validation planning, and engineer-reviewed delivery support.

PROFESSIONAL EXPERIENCE

VSolvit | Remote

Internal advancement

Software Engineer II, MFOM Comms Team

June 2026 - Present

- Build and maintain backend services for MFOM Comms using C#, .NET Framework 4.8, RESTful APIs, SQL-backed data access, stored procedures, service-layer logic, integration validation, and large monolithic enterprise application patterns supporting stable mission workflows.
- Support debugging, defect triage, root-cause analysis, production troubleshooting, and release readiness across existing monolithic services while preserving established behavior, traceability, maintainability, secure delivery expectations, and customer-facing operational continuity.
- Deliver backend changes through Jira-driven Agile workflows including sprint execution, ticket refinement, acceptance criteria review, defect resolution, code review feedback, stakeholder communication, release coordination, and documented handoff across technical work items.
- Review application behavior, isolate service defects, validate API and database interactions, document technical findings, and coordinate development tasks across Jira tickets, troubleshooting notes, release activities, and cross-team implementation dependencies.

Data Engineer II, Internal Tools Team

January 2026 - June 2026

- Implemented Microsoft Fabric medallion architecture with Python-based Bronze ingestion, incremental loading, SQL cast and standardization logic in Silver, and curated Gold aggregations that produced report-ready operational datasets for validation and stakeholder reporting.
- Built report-ready Gold outputs and configured Google Drive API ingestion into Google Sheets with scheduled refresh workflows supporting synchronization, data quality checks, traceability, controlled delivery, repeatable validation, and downstream reporting visibility.
- Developed ASP.NET Core Web APIs in C# for DoD systems handling CUI data using secure coding practices, DTO contracts, validation, dependency injection, async services, service-layer architecture, SQL-backed persistence, and maintainable backend delivery patterns.
- Validated API and data workflow behavior using Postman and Swagger/OpenAPI, maintained Azure DevOps Wiki documentation, supported IIS release readiness, resolved production issues, coordinated Agile delivery, and communicated status with technical and non-technical stakeholders.

Software Engineer I, Internal Tools Team

April 2025 - January 2026

- Developed Blazor WebAssembly frontend features integrated with ASP.NET Core APIs using C#, strongly typed DTOs, validation patterns, Razor components, enterprise interface contracts, usability improvements, and service-aligned workflow behavior.
- Applied SOLID principles and layered architecture across application components while supporting IIS deployments, EF Core migrations, SQL-backed workflows, release cycles, production defect resolution, documentation updates, and maintainable implementation patterns.
- Supported Azure DevOps Agile delivery through ticket creation, sprint setup, backlog refinement, WIP limits, story point estimation, predecessor-successor relationships, group email notifications, sprint reviews, team onboarding, and work item traceability.
- Used ChatGPT and Gemini to improve development workflow through structured research, documentation drafting, troubleshooting support, refactoring analysis, test scenario planning, repeatable validation steps, and engineer-reviewed implementation decisions.

Junior Software Engineer, Internal Tools Team

August 2024 - April 2025

- Built .NET 6 backend features using C#, Entity Framework Core, SQL, service-layer logic, data access patterns, DTOs, structured validation workflows, secure coding habits, and database-backed application behavior across sprint deliverables.
- Created developer validation plans, tested backend behavior, documented repeatable validation workflows, supported consistent implementation of application features, prepared code review context, and followed established enterprise development standards.
- Supported Agile sprint planning, standups, backlog refinement, defect resolution, code review preparation, documentation habits, cross-team technical communication, ticket traceability, and disciplined delivery within structured sprint cycles.
- Collaborated with senior engineers on implementation patterns, troubleshooting, production support preparation, secure coding practices, maintainable API design, database-backed systems, technical documentation, and professional communication.

Software Engineer Intern, Bosch Automotive Service Solutions

January 2023 - January 2024 | Hybrid, Oshtemo, MI

- Developed C# WebAssembly and user interface components connected to backend services, improving usability, application performance, maintainability, reliability, and interface behavior within an enterprise automotive software environment.
- Refactored legacy code, improved component reliability, resolved defects, validated behavior changes, and participated in Agile sprint planning, daily standups, sprint reviews, retrospectives, backlog discussions, and team implementation coordination.
- Created and maintained technical documentation including Swagger/OpenAPI references, API documentation, implementation notes, validation guidance, troubleshooting details, and handoff materials supporting maintainable delivery and team knowledge sharing.
- Worked under mentorship from senior engineers to improve code quality, architectural understanding, debugging discipline, documentation practices, professional software engineering execution, test awareness, and cross-functional software delivery habits.

TECHNICAL IMPACT

- Implemented Fabric medallion architecture with Python Bronze incremental ingestion, Silver SQL transformation and cast logic, and Gold aggregated datasets that converted source records into report-ready operational outputs for validation, traceability, and controlled stakeholder use.
- Built Google Drive and Google Sheets workflows to move validated Gold report outputs through scheduled refresh, synchronization, structured quality review, downstream reporting delivery, stakeholder visibility, and repeatable operational reporting processes.
- Built an HR chatbot that ingested HR documentation into a Pinecone vector database and used natural language retrieval to answer common HR questions about sick leave, promotions, benefits, and policies, reducing routine email requests and improving internal response consistency.
- Maintained Swagger/OpenAPI references, Azure DevOps Wiki documentation, Jira work items, IIS release procedures, troubleshooting steps, implementation notes, handoff materials, Agile sprint artifacts, and repeatable delivery documentation for production-ready support.

ENGINEERING STRENGTHS

- Own backend delivery across API design, service-layer implementation, validation, database integration, deployment support, troubleshooting, production recovery, documentation, Agile work tracking, stakeholder communication, and AI-assisted workflow improvement.
- Build for clarity, auditability, explicit DTO contracts, secure data handling, maintainable code structure, predictable release behavior, data quality, Agile traceability, cross-team alignment, and stable enterprise system operation under production constraints.
- Translate business processes into scalable technical solutions across backend services, frontend integration, Fabric data workflows, monolithic service support, production support, reporting outputs, technical documentation, sprint execution, and team handoff.

EDUCATION & CERTIFICATION

- Master of Science, Software Engineering - Western Governors University, Salt Lake City, UT - Sept 2025
- Bachelor of Science, Software Engineering - Western Governors University, Salt Lake City, UT - Jan 2024
- CompTIA Security+ | Interim Secret Clearance | Secure software delivery, backend security, CUI/CMMC-aligned development awareness
