

MATTHEW SMITH

matt.marcus.smith@gmail.com | (269) 689-4169 | Kalamazoo, MI | Open to Remote Work
.NET Software Engineer | Security+ | Interim Secret Clearance | ASP.NET Core Web API | C# | EF Core | Blazor | SQL | IIS

SUMMARY

Full-stack .NET Software Engineer building secure, enterprise-grade systems in DoD environments. Security+ certified with an Interim Secret Clearance and experience supporting CUI data handling and CMMC-aligned development. Strong background in ASP.NET Core Web API, C#, Blazor WebAssembly, Entity Framework Core Code First, SQL, Microsoft Fabric medallion workflows, Swagger/OpenAPI, IIS deployment, Azure DevOps, production support, structured documentation, AI-assisted workflow improvement, and cross-team communication.

TECHNICAL SKILLS

- Frontend / Integration:** Blazor WebAssembly, C# WebAssembly, Razor components, strongly typed DTO-aligned UI workflows, ASP.NET Core API integration, validation patterns, UI components, JavaScript, HTML, CSS, usability improvements, defect resolution.
- Backend / API:** C#, .NET 6+, ASP.NET Core Web API, REST API design, controller-based APIs, DTO design, model validation, dependency injection, async/await, LINQ, Swagger/OpenAPI, Postman, secure coding, production API support.
- Data / Fabric:** Entity Framework Core Code First, SQL, relational modeling, schema migrations, Microsoft Fabric pipelines, medallion architecture, Bronze incremental loading for new source records, Silver merge/upsert processing for deduplication and changed rows, Gold report-ready datasets and dashboards, Google Drive API ingestion.
- Architecture:** Clean Architecture, layered architecture, Controller to Service to DbContext flow, service-layer business logic, SOLID, explicit contracts, maintainable enterprise design, auditability, cross-team handoff.
- Security / Delivery:** CompTIA Security+, Interim Secret Clearance, CUI, CMMC-aligned development, IIS deployment, Git, Azure DevOps Wiki, Agile/Scrum, sprint planning, sprint facilitation, release support, production troubleshooting.
- AI Tools:** ChatGPT and Gemini for workflow improvement, code review support, documentation drafting, troubleshooting, refactoring analysis, test scenario planning, productivity gains, and engineer-validated implementation.

PROFESSIONAL EXPERIENCE

VSolvit | Remote

Internal advancement

Software Engineer II (Data-Heavy)

January 2026 - Present

- Develop ASP.NET Core Web APIs in C# for DoD systems handling CUI data using secure coding practices, DTO contracts, validation, dependency injection, async services, and maintainable service-layer architecture.
- Implement Microsoft Fabric medallion workflows with Bronze incremental loading for newest source records, Silver merge/upsert tables for deduplication and changed rows, and Gold report-ready datasets for dashboards and operational reporting.
- Build Google Drive API ingestion workflows that bring report data into structured Fabric and SQL-backed processes for validation, synchronization, data quality, traceability, and controlled downstream reporting.
- Validate API behavior using Postman and Swagger/OpenAPI, maintain Azure DevOps Wiki documentation, support IIS release readiness, troubleshoot production issues, and coordinate with technical and non-technical stakeholders.

Software Engineer I

April 2025 - January 2026

- Developed Blazor WebAssembly frontend features integrated with ASP.NET Core APIs using C#, strongly typed DTOs, validation patterns, and enterprise interface contracts.
- Applied SOLID principles and layered architecture across application components while supporting IIS deployments, EF Core migrations, SQL-backed workflows, release cycles, and production defect resolution.
- Used ChatGPT and Gemini to improve development workflow through structured research, documentation drafting, troubleshooting support, refactoring analysis, and test scenario planning under engineer validation.
- Participated in customer-facing discussions to clarify defects, communicate progress, align requirements, document decisions, and support Agile delivery through standups, sprint execution, and reviews.

Junior Software Engineer

August 2024 - April 2025

- Built .NET 6 backend features using C#, Entity Framework Core, SQL, service-layer logic, data access patterns, DTOs, and structured validation workflows.
- Created developer validation plans, tested backend behavior, documented repeatable validation workflows, and supported consistent implementation of application features across sprint deliverables.
- Supported Agile sprint planning, standups, backlog refinement, and defect resolution while learning enterprise development practices for secure coding, maintainable API design, and database-backed systems.
- Collaborated with senior engineers on implementation patterns, code review feedback, troubleshooting, production support preparation, documentation habits, and cross-team technical communication.

Software Engineer Intern, Bosch Automotive Service Solutions

January 2023 - January 2024 | Hybrid, Oshtemo, MI

- Developed C# WebAssembly and user interface components connected to backend services, improving usability, application performance, maintainability, and reliability.
- Refactored legacy code, improved component reliability, resolved defects, and participated in Agile sprint planning, standups, reviews, and retrospectives within an enterprise automotive software environment.
- Created and maintained technical documentation including Swagger/OpenAPI references, API documentation, implementation notes, and handoff materials to support maintainable delivery and team knowledge sharing.
- Worked under mentorship from senior engineers to improve code quality, architectural understanding, debugging discipline, documentation practices, and professional software engineering execution.

TECHNICAL IMPACT

- Implemented Fabric medallion architecture with Bronze incremental ingestion, Silver merge/upsert processing, and Gold report-ready datasets for dashboard and operational reporting use cases.
- Built Google Drive API ingestion workflows to move report files into structured Fabric and SQL-backed validation processes with synchronization, traceability, and controlled downstream reporting.
- Built an HR chatbot that ingested HR documentation into a Pinecone vector database and used natural language to answer common HR questions about sick leave, promotions, benefits, and policies, reducing routine email requests to HR.
- Maintained Swagger/OpenAPI references, Azure DevOps Wiki documentation, IIS release procedures, troubleshooting steps, implementation notes, and handoff materials for repeatable delivery.

ENGINEERING STRENGTHS

- Own backend delivery across API design, service-layer implementation, validation, database integration, deployment support, troubleshooting, production recovery, documentation, and AI-assisted workflow improvement.
- Build for clarity, auditability, explicit DTO contracts, secure data handling, maintainable code structure, predictable release behavior, data quality, and cross-team alignment.
- Translate business processes into scalable technical solutions across backend services, frontend integration, Fabric data workflows, production support, reporting outputs, and team documentation.

EDUCATION & CERTIFICATION

- Master of Science, Software Engineering - Western Governors University, Salt Lake City, UT - Sept 2025
- Bachelor of Science, Software Engineering - Western Governors University, Salt Lake City, UT - Jan 2024
- CompTIA Security+ | Interim Secret Clearance | Secure software delivery, backend security, CUI/CMMC-aligned development awareness
