SUMMARY

Software Engineer and Data Engineer with a Master of Science in Software Engineering and CompTIA Security+ certification. Experienced building enterprise applications, full stack services, system integrations, and data platforms in regulated DoD environments. Strong background in designing business workflows, developing APIs, integrating databases and external services, troubleshooting production issues, and delivering reliable software from development through deployment and support. Experienced designing automated data pipelines, transforming and synchronizing data across Medallion Architecture layers, maintaining auditability and data quality, and preparing curated datasets for reporting and downstream use. Also experienced developing AI-enabled applications and collaborating with stakeholders to translate technical and business requirements into maintainable solutions.

PROFESSIONAL EXPERIENCE

VSolvit | Remote

.NET Software Engineer – Backend | Internal Promotion

June 2026 – Present

- Support enterprise backend microservices in a regulated DoD environment using C#, .NET core, C#, Oracle SQL Developer, SQL, service-layer business logic, data-access patterns, integration testing, validation, and production-support.
- Leveraged premium GitHub Copilot agents to identify security risks, debugging, and support feature implementation.
- Analyze requirements, database dependencies, stored-procedure behavior, REST API integration points, validation rules, error paths, and acceptance criteria to support reliable backend delivery.
- Troubleshoot production issues using Visual Studio for debugging, root-cause analysis, traceability, and documented resolution.

.NET Software Engineer/Data Engineer II | Internal Promotion

Aug 2024 – Jun 2026

- Developed end-to-end application features that handled user input, business rules, validation, API communication, and database operations, using C# and the .NET stack to deliver complete, production-ready workflows.
- Built and improved interactive Blazor workflows using UI Frameworks like Telerik UI for Blazor, connecting front-end components to backend APIs, implementing validation and error handling, resolving usability issues, and maintaining consistent application behavior.
- Developed and maintained data engineering solutions in Microsoft Fabric using a Medallion Architecture (Bronze, Silver, and Gold), building scalable pipelines for ingestion, transformation, synchronization, and reporting.
- Engineered Bronze-layer Python ingestion scripts to append newly received data with ingestion timestamps, enabling Silver-layer processes to synchronize with the latest source data while preserving historical records, traceability, and auditability.
- Drove stakeholder adoption of Microsoft Fabric over Azure Synapse by presenting the technical case for Fabric and establishing it as the data platform for the solution.

.NET Software Engineer – Full Stack

Aug 2024 – Apr 2025

- Built full-stack .NET application functionality with C#, .NET 6, ASP.NET Core Web API, Blazor WebAssembly, EF Core, SQL Server, DTOs, service-layer logic, validation workflows, and database-backed behavior.
- Created Blazor WebAssembly UI workflows connected to ASP.NET Core APIs using Razor components, Telerik UI for Blazor, client-side validation, strongly typed request/response models, usability fixes, and consistent application behavior.
- Developed an AI-powered HR chatbot using C#, .NET, ASP.NET Core, OpenAI, text embeddings, Pinecone, Retrieval-Augmented Generation, and Windsurf-assisted development, **reducing employee inquiries to Human Resources by 32%**.
- Developed an AI-powered Joint Travel Regulations chatbot with a Blazor WebAssembly frontend and ASP.NET Core backend using C#, OpenAI, text embeddings, Pinecone, and Retrieval-Augmented Generation (RAG), providing context-aware guidance on per diem, lodging, transportation, reimbursements, allowances, and official travel policies.

Bosch Automotive Service Solutions | Remote

Application Developer Intern

Feb 2023 –

Feb 2024

- Built a greenfield C# WebAssembly help desk application for ticket intake, triage, routing, and escalation workflows.
- Created Swagger/OpenAPI references, API documentation, validation guidance, troubleshooting details, and handoff materials.
- Collaborated with cross-functional stakeholders to understand support workflows and gather application behavior requirements.
- Applied mentorship from senior developers, data engineers, and system architects to improve application design.

EDUCATION & CERTIFICATIONS

- **Master of Science, Software Engineering** - Western Governors University, Salt Lake City, UT | Feb 2024 - Feb 2026
- **Bachelor of Science, Software Engineering** - Western Governors University, Salt Lake City, UT | Feb 2022 - Feb 2024
- **CompTIA Security+** | Feb 2026
- **SAFe® Agilist (SA)** | Scaled Agile, Inc. | July 2026
